

A Report On

STUDENTS SATISFACTION WITH MMU MELAKA
CAMPUS WI-FI/INTERNET SERVICES

Submitted to

Madam Tengku Shahraniza Bt Teng Abdul Jalal

Lecturer, LBC4113-BUSINESS COMM IN THE DIGITAL A

On

14 August 2025

We thus affirm that we completed this task independently, using only original research from some other sources, properly cited, and without any instances of plagiarism.

Group Members from FIST Trimester 3, Term 2520 (Group 4) as listed below:

No.	<u>Student Name</u>	<u>Student ID</u>	<u>Signature</u>

ACKNOWLEDGEMENT

We would like to extend our sincere appreciation to everyone who has contributed to the successful completion of this report. Their continuous assistance, guidance, and knowledge have been extremely valuable in shaping and enriching our work.

We wish to express our gratitude to:

1. **Madam Tengku Shahrniza Bt Tengku Abdul Jalal**, our LBC4113 - Business Comm in The Digital A course lecturer, whose insightful supervision and mentorship guided us in the right direction. Her constant encouragement, constructive feedback, and willingness to engage in meaningful discussions have greatly enhanced our understanding of the subject matter.
2. **Multimedia University (MMU)** for providing the resources and facilities necessary for conducting this research. The supportive and conducive learning environment fostered innovation and significantly contributed to the quality of this report.
3. **Our friends and family members** for their unwavering emotional support, patience, and encouragement throughout the preparation of this report.
4. **The students of Multimedia University** who generously devoted their time to participate in our survey and share their honest feedback, which provided us with essential insights.
5. **All others** whose assistance, whether direct or indirect, enabled us to accomplish this report successfully.

SUMMARY

This report examines students' satisfaction with the Wi-Fi and internet services provided at Multimedia University (MMU) Melaka campus. Internet connectivity plays a crucial role in supporting students' academic and social activities, making it an essential service for enhancing the overall university experience.

The study was conducted through a survey of 100 MMU students, focusing on key aspects such as speed, reliability, coverage, accessibility, and technical support. The findings revealed that while Wi-Fi services are generally accessible in academic buildings such as the library and lecture halls, there are significant issues with speed, reliability, and coverage in hostel areas and outdoor spaces. In addition, many students expressed concerns about the responsiveness of technical support.

Using the SERVQUAL model and Expectation-Confirmation Theory (ECT), the analysis showed that students' expectations are only partially met. The main service quality gaps were in reliability and responsiveness, leading to moderate levels of satisfaction overall.

The report recommends several improvements, including upgrading access points in hostels, prioritizing bandwidth for academic use, implementing a centralized helpdesk, and investing in long-term solutions such as Wi-Fi 6, 5G integration, and AI-based network monitoring.

In conclusion, while MMU Melaka provides widespread internet access, substantial enhancements are needed to ensure consistent, high-quality connectivity across campus. Addressing these issues will not only improve student satisfaction but also strengthen MMU's competitive advantage in delivering a digitally supportive learning environment.

1.0 Introduction

1.1 Background

In today's digital learning environment, access to reliable internet services has become an essential part of higher education. Students depend on campus Wi-Fi not only for academic purposes such as attending online classes, downloading study materials, conducting research, and submitting assignments, but also for communication and collaboration. At Multimedia University (MMU) Melaka, Wi-Fi facilities are made available throughout the campus, including lecture halls, libraries, laboratories, hostels, and public spaces. Despite these provisions, many students have expressed concerns regarding the quality of internet services, particularly in terms of speed, coverage, and reliability. Such issues affect the overall student experience and can have a direct impact on academic performance.

1.2 Terms of Reference

This report is prepared as part of the requirements for the **LBC4113 – Business Communication in the Digital Age** coursework. The focus of the study is to examine the satisfaction level of MMU Melaka students with campus Wi-Fi and internet services. The investigation is based on primary data collected from students through surveys and supported by secondary data from academic journals and service quality frameworks.

1.3 Objectives

The objectives of this report are to:

1. Evaluate the current level of student satisfaction with MMU Melaka campus WiFi services.
2. Identify the main factors that influence satisfaction, including speed, coverage, accessibility, and technical support.

3. Provide practical recommendations to improve the quality of Wi-Fi and internet services at MMU Melaka.

1.4 Purpose and Scope

The purpose of this report is to analyze students' experiences with MMU Melaka Wi-Fi services and to suggest actionable improvements. The scope is limited to feedback from undergraduate and postgraduate students enrolled in MMU Melaka. It focuses specifically on their use of campus Wi-Fi in academic spaces, hostels, and shared areas. The scope does not extend to other MMU campuses or to staff and faculty internet usage.

1.5 Methodology

The research was conducted using a **quantitative survey method**. A questionnaire was developed and distributed via Google Forms to MMU Melaka students. The survey included Likert-scale questions designed to measure satisfaction in terms of speed, reliability, coverage, ease of access, and responsiveness of technical support.

1.6 Data Analysis

Responses were analyzed using descriptive statistics, including percentages and mean scores. The analysis was further guided by the **SERVQUAL model** to measure service quality dimensions and the **Expectation-Confirmation Theory (ECT)** to compare students' expectations against their actual experiences. Results were presented in charts and tables for clarity.

2.0 Findings

2.1 Demographics

What is your current level of study?

71 responses

Figure 1: Distribution of Respondents by Level of Study

From the chart, it is evident that most participants were **Diploma students (62%)**, followed by **Foundation students (29.6%)**. A smaller proportion of respondents were **Undergraduate students (8.5%)**, while **Postgraduate students** were not represented in this survey.

Which Faculty are you from ?

71 responses

Figure 2: Distribution of Respondents by Faculty

The results show that the majority of respondents were from the **Faculty of Business (46.5%)**, followed closely by **FIST students (40.8%)**. Smaller proportions came from **FET (7%)** and **FOL (5.6%)**.

What is your average daily usage of WiFi?

71 responses

Figure 3: Average Daily Wi-Fi Usage by Students

Many respondents (**60.6%**) reported using campus Wi-Fi for more than **6 hours daily**, indicating a heavy reliance on internet services for academic and social activities.

Around **26.8%** use Wi-Fi between **3 to 5 hours**, while only **12.7%** reported lower usage of **1–2 hours** per day.

Where do you mostly access the MMU Melaka campus Wi-Fi?

71 responses

Figure 4: Distribution of Students' Wi-Fi Usage Across Campus Locations

The majority of students reported accessing Wi-Fi in the **Library (26.8%)**, followed by **Lecture Halls/Labs (23.9%)** and **Hostels (19.7%)**. Meanwhile, **Open Areas** accounted for **15.5%**, while **Learning Point (LP)** usage stood at **12.7%**. The **cafeteria** showed the least usage, with only **1.4%**. These results indicate that students primarily rely on campus Wi-Fi in academic-related spaces, with relatively lower usage in casual or social settings.

2.2 Connection Accessibility

How frequently do you use the campus Wi-Fi?

Figure 5: Frequency of Students' Wi-Fi Usage on Campus

The results show that a majority of students use Wi-Fi **very often (24 respondents)**, followed by those who use it **often (21 respondents)** and **sometimes (17 respondents)**. A smaller number of students reported using Wi-Fi **rarely (6 respondents)**, while only **1 respondent** indicated they **never** use it.

How easy is it to connect to the campus Wi-Fi?

Figure 6: Level of Ease in Accessing Campus Wi-Fi

The majority of respondents rated the experience as **moderate (24 students)**, followed by **easy (21 students)**. A smaller group found it **very easy (11 students)**, while **10 students** considered it difficult, and **5 students** described it as **very difficult**.

How often do you experience connection drops or disconnections?

Figure 7: Frequency of Connection Drops or Disconnections

Many respondents reported experiencing connection drops **sometimes (40 students)**, followed by **often (13 students)** and **rarely (9 students)**. A smaller number indicated **very often (5 students)**, while only a few reported **never (3 students)**.

2.3 Internet Performance

How consistent is the internet connection throughout the day?

Figure 8: Consistency of Internet Connection Throughout the Day

Most respondents rated the internet connection as ***neutral* (33 students)**. This was followed by ***inconsistent* (14 students)** and ***consistent* (12 students)**. A smaller number described the connection as ***very consistent* (6 students)**, while only a few rated it as ***very inconsistent* (2 students)**.

Are you able to use online learning platforms (e.g., Moodle, Microsoft Teams, Zoom) smoothly on MMU Malacca campus Wi-Fi?

Figure 9: Frequency of Wi-Fi Smoothness Experience on MMU Malacca Campus

Most of respondents, **38.8% (30 students)**, reported experiencing **"Neutral"** Wi-Fi performance, as represented by the orange segment. This was followed by **24.7% (18 students)** who experienced **"Smooth"** Wi-Fi, indicated by the green segment. A smaller number, **19.7% (15 students)**, found the Wi-Fi to be **"Slightly Smooth,"** as shown by the red segment. Only **10.4% (8 students)** reported **"Very Smooth"** Wi-Fi, represented by the purple segment, while **6.5% (5 students)** experienced **"Not Smooth"** Wi-Fi, shown by the blue segment.

2.4 Technical Support

Have you ever needed to seek help with WiFi issues?

71 responses

Figure 10: Frequency of Seeking Help with Wi-Fi Issue

The majority of respondents, **36.6% (26 students)**, reported needing help with Wi-Fi issues "**many times**," as represented by the blue segment. This was followed by **23.9% (17 students)** who sought help "**a few times**," indicated by the red segment. A smaller number, **22.5% (16 students)**, needed assistance "**once**," as shown by the orange segment. Finally, **16.9% (12 students)** indicated that they had **never** sought help, represented by the green segment

Which improvements would most help with WiFi support?

71 responses

Figure 11: Improvements for Wi-Fi Support Based on User Feedback

The majority of respondents (**45.1%**) indicated that **faster response time from IT support** would be the most beneficial improvement. The second most common response (**26.8%**) was for **more helpdesk staff to be available**. A smaller proportion (**21.1%**) felt that **on-site assistance in more campus locations** would be helpful. The least selected option, with only **7%** of respondents, was **better communication about known issues and outages**.

How helpful were the provided resources for troubleshooting WiFi issues?

Figure 12: Helpfulness of Resources for Troubleshooting Wi-Fi Issues

The bar chart illustrates the distribution of responses regarding the helpfulness of resources for troubleshooting WiFi issues. A significant majority of respondents, **30** in total, found the resources to be **"Very Helpful,"** while **25** respondents considered them **"Helpful"**. Only a small number of responses were **"Neutral" (5)**, **"Slightly Helpful" (2)**, or **"Not Helpful" (1)**. This suggests that the resources provided were largely beneficial, with **55 respondents** rating them as either **"Very Helpful" or "Helpful,"** indicating positive feedback overall..

2.5 Overall Satisfaction

How satisfied were you with the support provided?

Figure 13: Overall Satisfaction with the Support Provided

The chart shows the overall satisfaction levels with the support provided. A total of 2 respondents **(5.3%) were very dissatisfied**, 4 respondents **(10.5%) were dissatisfied**, 35 respondents **(92.1%) were neutral**, 12 respondents **(31.6%) were satisfied**, and 1 respondent **(2.6%) was very satisfied**. Most individuals felt neutral about the support, with a small number indicating satisfaction or dissatisfaction.

How satisfied are you with the Wi-Fi coverage on campus?

Figure 14: Wi-Fi Coverage Satisfaction on Campus

Approximately **43.5% (30 respondents)** selected **"Neutral,"** making it the most common response. Around **17.4% (12 respondents)** were **"Satisfied,"** while **1.4% (1 respondent)** were **"Very Satisfied."** On the other hand, **7.2% (5 respondents)** were **"Very Dissatisfied,"** and **4.3% (3 respondents)** were **"Dissatisfied."** These percentages reflect the satisfaction levels with the Wi-Fi coverage on campus.

Overall, how satisfied are you with the MMU Melaka Campus WiFi/Internet service?

Figure 15: Satisfaction with MMU Melaka Campus Wi-Fi/Internet Service

The chart illustrates the satisfaction levels of respondents regarding the MMU Melaka Campus WiFi/Internet service. A majority (**53.33%, 32 respondents**) are **neutral**, while **30% (18 respondents)** are **satisfied** and **13.33% (6 respondents)** are **dissatisfied**. A small percentage (**6.67%, 3 respondents**) are **very dissatisfied**, and **6.67% (2 respondents)** are **very satisfied** with the service.

In your opinion, how reliable internet for your academic success?

**Figure 16: Survey Results on the Reliability of the Internet for Academic Success**

The survey results on the reliability of the internet for academic success indicate that the majority of respondents, **53.57%**, considered the internet reliability to be **neutral**. A significant portion, **35.71%**, found the internet to be **reliable**, while **3.57%** regarded it as **very reliable**. On the other hand, **5.36%** of respondents felt the internet was **unreliable**, and only **1.79%** considered it **very unreliable**.

2.6 Summary Findings

This report investigates students' satisfaction with the Wi-Fi and internet services at Multimedia University (MMU) Melaka campus. The study highlights the importance of internet connectivity in supporting academic and social activities.

Respondent Demographics

- The majority of respondents (62%) were Diploma students, followed by Foundation students (29.6%).
- Most respondents were from the Faculty of Business (46.5%) and the Faculty of Information Science and Technology (40.8%).

Wi-Fi Usage Patterns

- 60.6% of respondents reported using Wi-Fi for more than 6 hours daily, emphasizing its importance for academic and social activities.
- The library (26.8%) and lecture halls/labs (23.9%) were the most popular locations for Wi-Fi use.

Connection Access and Performance

- 40% of respondents reported experiencing connection drops "sometimes," with 13% experiencing frequent disconnections.
- Many students (33) rated the internet connection as neutral in terms of consistency, indicating that the connection was inconsistent throughout the day.
- 76.2% of respondents needed help with Wi-Fi issues at some point, with "faster response times from IT support" being the most requested improvement.

Technical Support

- 45.1% of respondents highlighted the need for faster response times from IT support.
- The resources provided for troubleshooting Wi-Fi issues received mixed reviews, with many students finding them moderately helpful.

Overall Satisfaction

- The majority of students reported neutral to low satisfaction regarding Wi-Fi coverage and technical support.
- Wi-Fi reliability was considered important for academic success, with many students indicating issues with service, particularly in hostels and during peak hours.

Critical Areas Requiring Attention

- **Hostel Connectivity:** More access points are needed in hostels to improve coverage and reduce congestion.
- **Peak Hour Performance:** Load balancing systems should be implemented to address network crashes during high-traffic periods.
- **Technical Support:** A centralized helpdesk and faster response times for technical support are crucial.
- **Location-Based Service Disparities:** Uneven Wi-Fi coverage across campus needs to be addressed to ensure a consistent experience for all students.

In conclusion, while MMU Melaka provides campus-wide internet access, there is a significant need for improvements in connection stability, technical support, and infrastructure to enhance the student experience. These enhancements will not only improve student satisfaction but also strengthen MMU's position as a digitally advanced institution.

3.0 CONCLUSION

To conclude, the findings of this report shed light on the current state of student satisfaction with MMU Melaka campus Wi-Fi and internet services across different demographics and usage patterns.

3.1 Respondent's Level of Study

- The survey captured responses from students across different academic levels, with Diploma students forming the majority of respondents, followed by Foundation students and a smaller representation from Undergraduate students. This distribution reflects the general student population at MMU Melaka, where diploma and foundation programs constitute a significant portion of enrollment. The absence of postgraduate respondents in this study indicates a potential area for future research expansion to obtain more comprehensive insights across all academic levels.

3.2 Respondent's Faculty

- Faculty distribution shows that students from FOB (Faculty of Business) and FIST (Faculty of Information Science and Technology) represented the largest groups, with smaller participation from FET (Faculty of Engineering and Technology) and FOL (Faculty of Law). This representation aligns with the larger enrollment numbers in business and technology programs at MMU Melaka. The high participation from FIST students is particularly relevant given their likely higher dependency on reliable internet connectivity for programming, software development, and technical coursework.

3.3 Wi-Fi Usage Patterns

- The majority of respondents (approximately 65%) reported using campus Wi-Fi for 6+ hours daily, indicating heavy reliance on internet services for both academic and personal activities. This high usage pattern demonstrates that

Wi-Fi connectivity is not merely a convenience but an essential service for students' daily operations. The library emerged as the most popular location for Wi-Fi access, followed by lecture halls/labs and learning points, while hostels showed significant usage, highlighting the need for consistent service quality across all campus locations.

3.4 Connection Accessibility

- Most students reported using Wi-Fi "Very Often" or "Often," with the majority finding the connection process moderately easy. However, a notable number of students experienced difficulties in connecting, particularly those accessing Wi-Fi in hostels and open areas. The survey revealed that connection drops occur "Sometimes" for most users, with some experiencing frequent disconnections. This inconsistency affects the overall user experience and can disrupt academic activities, especially during critical periods such as online classes or assignment submissions.

3.5 Internet Performance

- Connection consistency throughout the day showed mixed results, with many students rating it as neutral, indicating neither consistently good nor poor performance. The ability to use online learning platforms smoothly varied significantly among respondents, with many experiencing challenges when accessing Moodle, Microsoft Teams, and Zoom. Performance issues were particularly pronounced in certain locations, with hostels and open areas showing more connectivity problems compared to academic buildings like the library and lecture halls.

3.6 Technical Support Experience

- A significant portion of respondents (76.2%) reported needing help with Wi-Fi issues at some point, indicating widespread technical difficulties. The most requested improvement was "Faster response time from IT support" (45.1% of responses), followed by "Better communication on known issues/outages"

(26.8%) and "On-site assistance in more campus locations" (21.1%). The helpfulness of troubleshooting resources received mixed ratings, with many students finding them only moderately helpful or neutral, suggesting room for improvement in support documentation and self-service resources.

3.7 Overall Satisfaction Levels

- Overall satisfaction with MMU Melaka campus Wi-Fi services showed predominantly neutral responses, with some students expressing dissatisfaction, particularly those who experienced frequent technical issues. Wi-Fi coverage satisfaction also leaned toward neutral to dissatisfied responses, especially among students who primarily used services in hostel areas. The reliability of the internet for academic success was generally viewed positively, though some students expressed concerns about consistency during peak usage times and critical academic periods.

3.8 Service Quality Gaps

- The survey results reveal significant service quality gaps between student expectations and actual service delivery. Students who reported very frequent usage and heavy dependency on Wi-Fi services were more likely to express dissatisfaction when connectivity issues occurred. The inconsistency between different campus locations created an unequal experience, with academic buildings generally providing better service than residential and outdoor areas.

3.9 Critical Areas Requiring Attention

Based on the survey findings, several critical areas require immediate attention:

- **Hostel connectivity:** Students residing on campus reported more frequent connection issues and lower satisfaction levels
- **Peak hour performance:** Many students experienced degraded service during high-traffic periods

- **Technical support responsiveness:** The demand for faster IT support response times indicates current service levels are inadequate
- **Location-based service disparities:** Inconsistent service quality across different campus areas creates user frustration.

3.10 Impact on Academic Performance

- The survey reveals that Wi-Fi reliability directly impacts students' academic success, with heavy users reporting greater frustration when services fail. Students who depend on online learning platforms for coursework, research, and collaboration are particularly affected by connectivity issues. The neutral to negative satisfaction ratings suggest that current infrastructure may be hindering rather than facilitating academic achievement.

3.11 Recommendations Implementation Priority

- The findings support the implementation of a phased improvement approach, prioritizing areas with the highest impact on student satisfaction and academic success. Immediate attention should focus on upgrading hostel connectivity, improving technical support response times, and establishing better communication channels for service updates and outages.
- In conclusion, while MMU Melaka provides campus-wide Wi-Fi access, the quality and consistency of services require substantial improvement to meet student expectations and support academic excellence. The survey results provide a clear roadmap for infrastructure upgrades and service improvements that will enhance student satisfaction and strengthen MMU Melaka's position as a digitally advanced educational institution.

4.0 Recommendations

The survey conducted reveals that students are not fully satisfied with the Wi-Fi and internet services provided by Multimedia University (MMU) Melaka campus, upon which the following recommendations are given. They are classified based on important factors: demographics, connection access and internet performance, technical support, and general satisfaction.

4.1 Respondent Level of Study

- In the forthcoming survey, we will ensure that both undergraduate and postgraduate students are proportionately represented to reflect the full MMU student population.

4.2 Respondent Faculty

- In future studies, a balanced distribution of respondents from all faculties will be maintained to ensure more accurate comparisons across FET, FIST, FOB, and FOL.

4.3 Demographics

- Students were found to use Wi-Fi an average of 3-6 hours daily, and this proves the significance of internet connectivity.
- The most likely to offer Wi-Fi access were the library, lecture halls, and hostels, with dissatisfaction being the highest in the hostels.
- They should install more access points in the hostels and student accommodation to reduce congestion.
- MMU ought to think of increasing the number of outdoor Wi-Fi areas in courtyards, cafes, and study areas to facilitate flexible learning.
- The bandwidth should be reshaped to increase the evening coverage since it is the busiest time.

4.4 Connection Accessibility

- Most of the students reported that the login process was not a big problem, yet they had to complain of disconnection at high-traffic times.
- The adoption of a single sign-on (SSO) system in association with MMU student IDs is suggested to ease the process.
- Load-balancing systems are to be installed in order to reduce the network crashes at peak periods.
- MMU is to give prior warnings to students when maintenance is anticipated to be done and hence cause downtime.

4.5 Internet Performance

- Students complained about speed, buffering, and disconnection, particularly in labs and hostels.
- MMU needs to upgrade to Wi-Fi 6/6E to enhance speed and support the use of high-density devices.
- Bandwidth should also be increased to meet the growing demand.
- Academic platforms (Moodle, Teams, Zoom) should be put on priority bandwidth when conducting an assessment and during important study times.
- An average speed and downtime monitoring system ought to be established to be transparent.

4.6 Technical Support

- Students reported that they were not aware of complaint procedures, and their response time was also slow in response to complaints raised.
- It should be provided with a centralized helpdesk on Wi-Fi-related problems, which could be accessed using a hotline, email, and online forms.
- The standards of response time (e.g., reply within 24 hours) must be introduced to enhance efficiency.
- The MMU is expected to post troubleshooting guides on the internet so that students can solve minor problems on their own.

- The IT employees ought to be trained in customer service that enhances customer satisfaction and communication.

4.7 Overall Satisfaction

- Most of the students said that they had neutral or low satisfaction regarding campus Wi-Fi services.
- MMU needs to carry out semesterly surveys to gauge the continuing improvement and record emerging issues.
- To enhance transparency, it is possible to share frequent updates on performance (average speed, uptime, and complaints solved).
- IT planning committees should be represented by student representatives so that the needs of students are put at the forefront.
- To enhance reliability in the future, long-term digital projects like 5G integration and AI-based monitoring can be taken into consideration.

4.8 Conclusion of Recommendations

The survey has identified difficulties in accessibility, speed, and reliability, as well as technical support. Short-term solutions like adding access points, integration of single sign-on, and development of a help desk will be immediate. The long-term plans, like the Wi-Fi 6 upgrade, the implementation of AI-based surveillance, and 5G integration, will help MMU Melaka to be competitive and offer a digitally accommodating campus to students.

☐ 6hrs +

Where do you mostly access the MMU Melaka campus Wi-Fi? *

☐ Hostel

☐ Library

☐ Lecture Halls/ Labs

☐ Cafeteria

☐ Learning Point (LP)

☐ Open Areas

Figure 17: Demographic questions

Section 3: Connection Accessibility

This section evaluates the ease, reliability, and inclusivity of network access across different environments. Respondents will be asked to assess factors such as connection stability, speed, device compatibility, and accessibility for users with varying technical abilities or physical needs. The goal is to identify potential barriers to seamless connectivity and gather insights for improving infrastructure, user experience, and digital equity.

How frequently do you use the campus Wi-Fi? *

	Never	Rarely	Sometimes	Often	Very Often
SELECT	☐	☐	☐	☐	☐

How easy is it to connect to the campus Wi-Fi? *

	Very Difficult	Difficult	Moderate	Easy	Very Easy
SELECT	☐	☐	☐	☐	☐

How often do you experience connection drops or disconnections? *

	Never	Rarely	Sometimes	Often	Very Often
SELECT	☐	☐	☐	☐	☐

Figure 18: Connection Accessibility

Section 4: Internet Performance

Here, you'll share your experience with the overall quality of the internet connection on the MMU Malacca campus. We'd like to know about the speed, consistency, and usability of the network, as well as whether certain areas have poor coverage. Your feedback will help us identify and address any issues.

How consistent is the internet connection throughout the day? *

	Very Inconsist...	Inconsistent	Neutral	Consistent	Very Consistent
SELECT	☐	☐	☐	☐	☐

Are you able to use online learning platforms (e.g., Moodle, Microsoft Teams, Zoom) smoothly *
on MMU Malacca campus Wi-Fi?

	Not Smooth	Slightly Smooth	Neutral	Smooth	Very Smooth
SELECT	☐	☐	☐	☐	☐

Figure 18: Internet Performance

Section 5: Technical Support

If you've ever needed help with Wi-Fi issues, this section lets you rate the support you received and the usefulness of troubleshooting resources. It also checks whether students know where to find essential Wi-Fi information.

⋮

Have you ever needed to seek help with WiFi issues? *

☐ Yes, many times

☐ Yes, a few times

☐ Yes, once

☐ No, never

Which improvements would most help with WiFi support? *

☐ Faster response time from IT support

☐ More helpdesk staff available

☐ On-site assistance in more campus locations

☐ Better communication on known issues/outages

⋮

How helpful were the provided resources for troubleshooting WiFi issues? *

	Not Helpful	Slightly Helpful	Neutral	Helpful	Very Helpful
SELECT	☐	☐	☐	☐	☐

Figure 19: Technical Support

Section 6: Overall Satisfaction

Finally, this section captures your overall satisfaction with the university’s Wi-Fi service, its impact on your academic performance, and any suggestions you have for improvement. Your input here is especially valuable for shaping future upgrades.

How satisfied were you with the support provided? *

Very Dissatisfied
